

## HD in Breeding Barn

The 2006 covering figures have come in from Blue Gum Farm and Philip Campbell reports that Elvis had a 91% fertility rate, with the few that missed either not getting back to him in the time available or some other reason.

The 2006 figures being that he served 163 mares with 148 in foal on the 45 day tests.

This great report card is a testimony to the fantastic team at Blue Gum and their facilities. It's also an indication of the champs high loving! And any broodmare owner has got to love that.

These latest figures match very well with his 2005 servings of over 160 mares. These 2006 born foals are now on the ground and the reports from owners and breeders are fantastic.

It's all looking good for Elvis.
